

EoPlex Technologies is a venture backed start-up in Redwood City, developing new technology for making small, complex ceramic and metal devices. We are growing and have an immediate need for a talented process engineer to join our technical team.

This position will entail hands-on responsibilities across all production processes including screenprinting, thermal processing, sintering, and metrology.

Daily activities will include:

- Process and material characterization
- Determination and implementation of appropriate process control methods.
- Planning and conducting experiments for process scale-up
- Support of production operations
- Commissioning of new equipment and technologies

Requires engineering degree (ME, ChE, EE preferred) and 2-5 years relevant experience, preferably in high tech start-up. Must have strong analytical and computer skills; experience in statistics (SPC and DOE) strongly preferred. Must be able to work effectively across disciplines and to communicate effectively.
