

EoPlex Technologies is a venture backed start-up in Redwood City, developing new technology for making small, complex ceramic and metal devices. We are growing and have an immediate need for a talented mechanical engineer to join our engineering group team.

This position will entail design, installation and commissioning of process equipment and tooling and support of manufacturing expansion.

Daily activities will include:

- Design of mechanical fixtures and components
- Installation and commissioning of new equipment
- Troubleshooting of process equipment operation
- Support of production operations
- Commissioning of new equipment and technologies

Requires engineering degree (ME preferred) and 2-5 years relevant experience, preferably in high tech start-up. Experience in process automation and vision systems highly desired. Must have strong analytical and computer skills including demonstrated experience with AutoCAD and Solidworks. Must be able to work effectively in a fast paced environment and to communicate effectively.

Please submit resumes to jobs@eoplex.com
